

Employee Attrition Analysis Report

Prepared by: Jazmyn Singh

This report provides insights into employee attrition using exploratory data analysis (EDA) and predictive modeling.

1. Overview

This report examines attrition trends within the workforce, identifying key demographic and organizational factors that influence employee turnover. The analysis combines exploratory visualizations with predictive modeling to extract actionable insights.

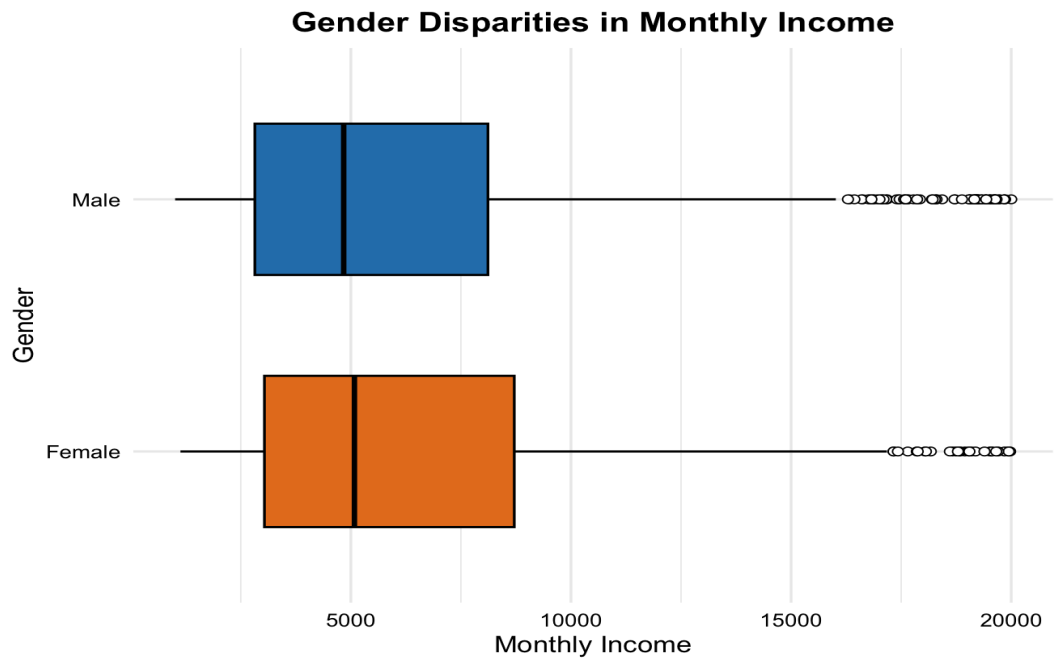

Attrition Distribution

2. Demographics

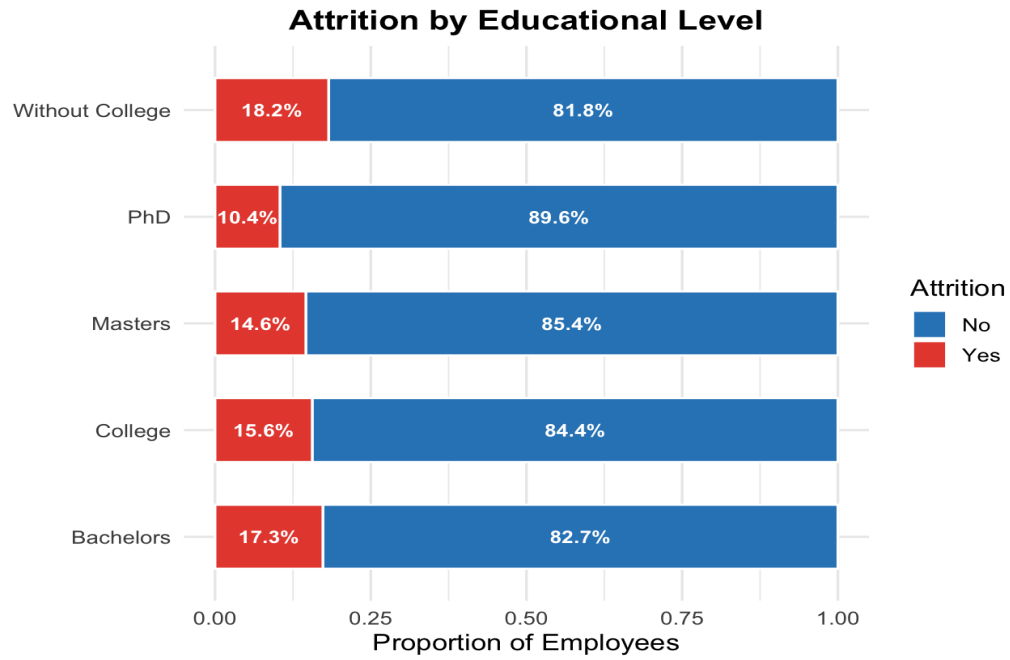

Age, gender, and education are key factors influencing attrition. Younger employees (Millennials) showed higher job mobility, while income disparities were evident across gender groups.

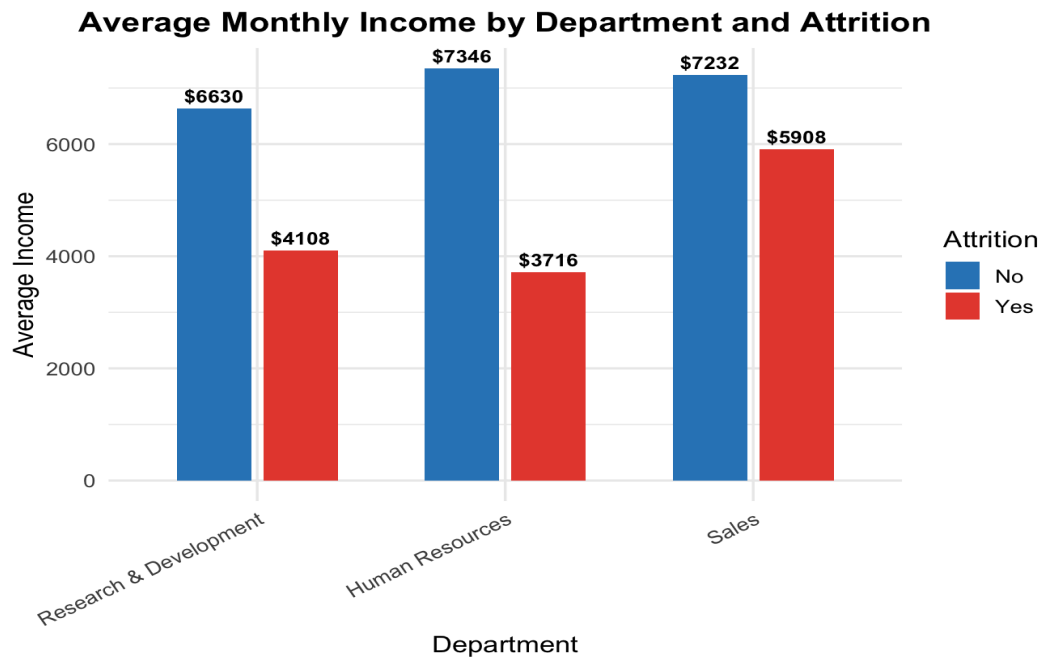

Number of Employees

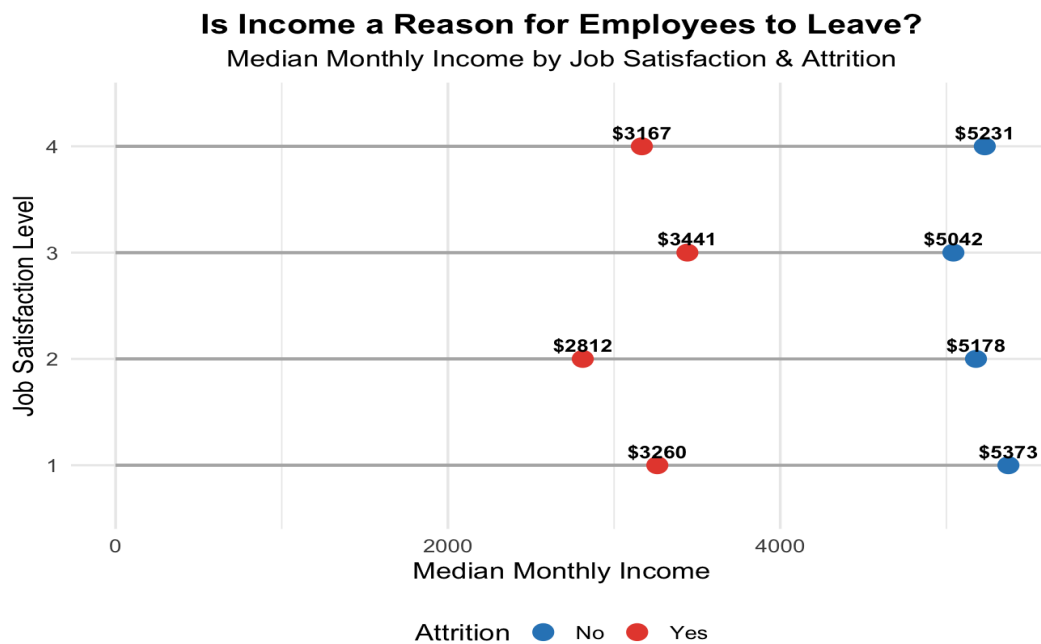

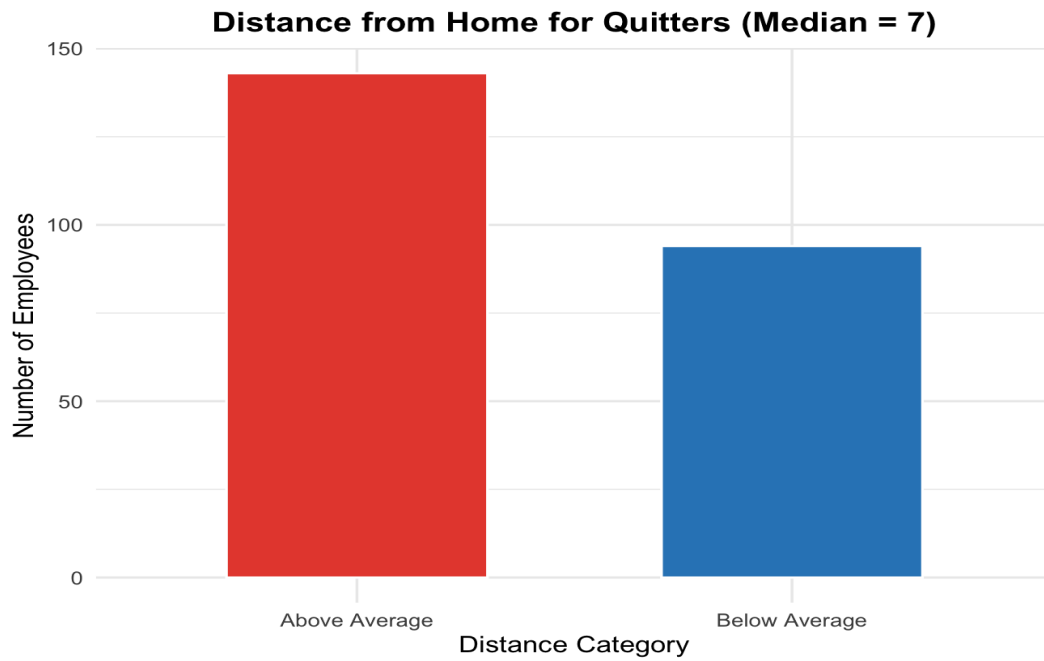

3. Compensation & Work Conditions

Income, salary hikes, overtime, and work-life balance were significant contributors to attrition. Employees with poor work-life balance and lower compensation were more likely to leave.

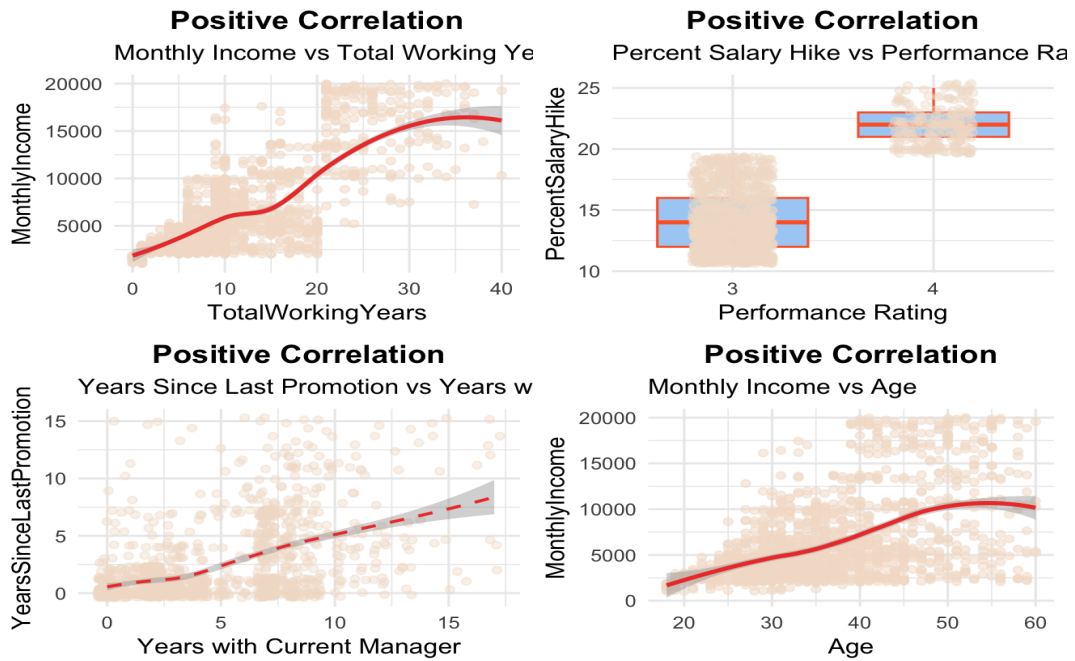

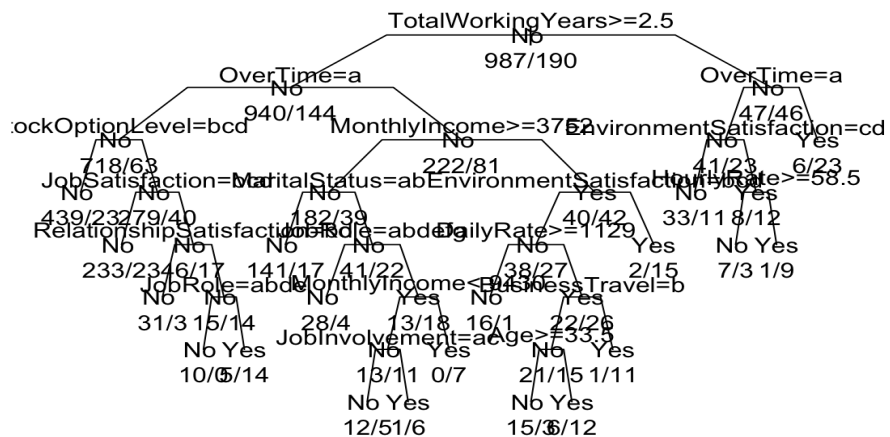

4. Correlation & Predictive Modeling

Correlation analysis revealed strong links between working years, income, and attrition. Decision trees and logistic regression models were used to predict attrition outcomes.

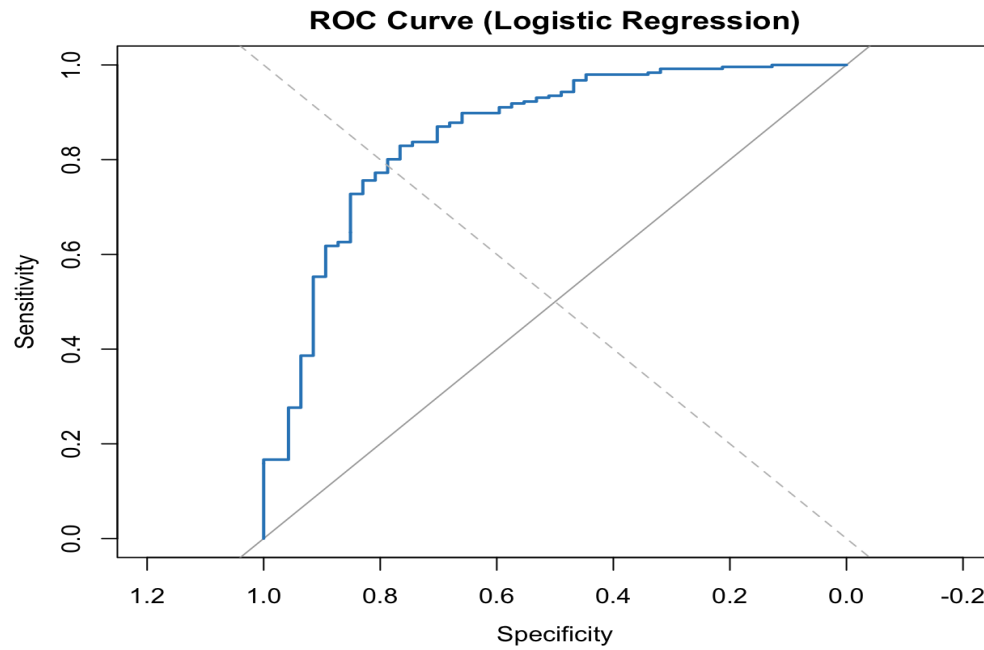

Training Set's Classification Tree

5. Recommendations

- Address gender pay disparities by introducing equitable compensation policies. - Improve work-life balance through flexible scheduling and reduced overtime. - Focus retention efforts on Millennials, who demonstrate higher job mobility. - Enhance career development and promotion pathways to reduce attrition risk. - Use predictive modeling in HR analytics for proactive employee retention strategies.
